this major textbook provides comprehensive coverage of the analytical tools required to determine the dynamic response of structures the topics covered include formulation of the equations of motion for single as well as multi degree of freedom discrete systems using the principles of both vector mechanics and analytical mechanics free vibration response determination of frequencies and mode shapes forced vibration response to harmonic and general forcing functions dynamic analysis of continuous systems and wave propagation analysis the key assets of the book include comprehensive coverage of both the traditional

and state of the art numerical techniques of response analysis such as the analysis by numerical integration of the equations of motion and analysis through frequency domain the large number of illustrative examples and exercise problems are of great assistance in improving clarity and enhancing reader comprehension the text aims to benefit students and engineers in the civil mechanical and aerospace sectors

the book presents a systematic study of coherent phenomena in molecule doped rare gas crystals exemplified on bromine and iodine molecules in solid argon and krypton ultrashort laser pulses are applied to prepare vibrational wave packets on the molecules their dynamics is investigated via the pump probe method the principles of classical and quantum mechanical coherence are introduced in the first chapters together with the concepts of wave packet focusing and fractional revivals those are used to deduce the vibrational and electronic decoherence of molecular wave packets in the rare gas host a novel coherent control scheme based on chirped laser pulse excitation is worked out to manipulate the wave packets furthermore the molecular energy relaxation and the rotational behaviour in the rare gas host are discussed apart from the molecular wave packets coherent phonons of the rare gas crystal are investigated via the pump probe spectroscopy on the molecule those phonons are excited impulsively in a molecular electronic transition and modulate the host density close to the molecule due to the special probe situation only coherent zone boundary phonons show up in the transients
