calogero moser systems which were originally discovered by specialists in integrable systems are currently at the crossroads of many areas of mathematics and within the scope of interests of many mathematicians more specifically these systems and their generalizations turned out to

have intrinsic connections with such fields as algebraic geometry hilbert schemes of surfaces representation theory double affine hecke algebras lie groups quantum groups deformation theory symplectic reflection algebras homological algebra koszul algebras poisson geometry etc the goal of the present lecture notes is to give an introduction to the theory of calogero moser systems highlighting their interplay with these fields since these lectures are designed for non experts the author gives short introductions to each of the subjects involved and provides a number of exercises
